

JIGHI THREAT MONITOR PROGRAM

Streamline your security operations center (SOC)

What is Jighi Threat Monitoring Program (JTMP)?

The Jighi Threat Monitoring Program (JTMP) is a channel program that enables other security service providers to implement JTM for their customers. Jighi provides those service providers with certified training and tools to implement threat intelligence as part of your security operation center.

What are the JTMP's Responsibilities?

The JTMP provides security operations center (SOC) with proactive security monitoring, and alerting to ensure customers have full visibility of threats and incidents in your managed networks. The JTMP assists with onboarding, including:

- 1** Gathering information about your network, systems, IPS, people, tools, and environments in collaboration with you
- 2** Creating log collector(s) and agents
- 3** Setting up the escalation process with your contacts (e.g., your team's contact information and alert notification order)
- 4** Turning up the log sources, alert setup, rules and dashboards in Threat Monitor
- 5** Enabling your security operations center (SOC)

What are the First Step I need to take as an MSP?
